

We Hear You Loud & Clear!

We've Got WiMAX Testing and WiMAX Communications Covered!

Wireless Communications presents all kinds of new challenges for power amplifiers. But finding the right source to provide those amplifiers is no challenge at all. All it takes is one call to AR.

RF/Microwave Instrumentation has the amplifiers you need for testing WiMAX components (4 - 8 GHz, 15 - 120 watts). They reproduce signals with remarkable fidelity. And our entire line of "S" Series amplifiers (0.8 - 20 GHz) give you more useable power and unequalled performance for your wireless testing.

Modular RF has amplifiers and modules with the power, frequency ranges and features you need, for WiMAX and virtually every kind of wireless system. For example, the CMS1070 for wireless broadband networks features 3.4 - 3.7 GHz and up to 50 watts of power and is 802.16d compliant. We built this in just 45 days.

If it's not in our brochure, we can usually create a customized version to meet your specs. Talk to us about your specific needs.

Why not put the expertise and all the resources of the global leader to work for you? When it comes to the unique needs of wireless communications, we hear you loud and clear.

AR products are backed by the best and most comprehensive warranty in the business; and by a global support network that's second to none. We're here to help you today, tomorrow and always.
